

KRYONBUBBLES TRIGGER AND AEROSOL

REFRIGERANT LEAK DETECTOR

READY TO USE

KryonBubbles is a leak detector for refrigerant, liquefied and compressed gases, including flammable gases. Available in liquid/trigger or aerosol versions. Designed with the correct viscosity level, it adheres effectively to surfaces ensuring high sensitivity to leaks. Forms highly visible and persistent bubbles even at low temperatures, allowing leak detection with absolute precision. Suitable for folders, welds, exchangers. Applicable on metals and plastics, works even in the presence of moisture. Always consult the product safety data sheet before use and wear protective clothing.

Instructions for use:

Leak detector for refrigerant gases, Suitable for all types of gas, not temperature sensitive. Dispense into areas where a leak is suspected, cover the entire affected area with the product. Forms persistent and highly visible bubbles. At the end of the treatment clean with paper or a soft cloth.

Available formats:

1 litre with 360° trigger (allows the bottle to be used upside down)

400 ml aluminium spray can - net content excluding propellant 300 ml. (nitrogen propellant, non-flammable)
