

KRYON FINETUNING EVAPORATOR LIQUID CLEANER

PROFESSIONAL ALCOHOL-BASED CLEANER FOR AIR CONDITIONING MAINTENANCE

READY TO USE

Kryon® FineTuning is the quick and effective solution for frequent maintenance of air conditioning systems (indoor units). Its solvent base loosens dirt and directs it towards the drain, leaving a pleasant clean scent. It evaporates quickly and leaves no residue. It can be used in both domestic and industrial applications, as well as for the maintenance of cars, trucks and motor homes. For heavily soiled situations, it can be combined with KryonFoamy, a foaming cleaner. In this case, apply the foam first to loosen dirt, then use Kryon® Finetuning as a finish for deep cleaning.

Always consult the product safety data sheet before use and wear protective clothing.

Instructions for use:

Disconnect the power supply to the indoor unit of the air conditioning system. Shake before use, dispense the product onto the surfaces to be cleaned, holding the jet at about 20 cm.

Dab with soft cloth or suitable brushes afterwards. Can be used alone or together with the foaming version for deeper cleansing. In this case use as a rinse.

Formats available:

400 ml aerosol
